

OVAL

Strong wardrobe tube for contemporary furniture design

OVAL

Strong wardrobe tube for contemporary furniture design

FEATURES

Oval is an innovative range of wardrobe tubes for modern furniture construction. The patented shaping ensures highest strength with sustainable use of material. The production lines to produce these tubes are state of the art: high precision stamping combined with high performance roll forming ensure a cost-effective production at a constantly high level of quality.

BENEFITS

Oval tubes are important accessories for every stand alone or walk-in wardrobe and ensure a safe and orderly storage of clothing.

The oval range stands out with a series of features and benefits:

- Long life thanks to the use of quality raw materials
- High performance at affordable prices
- Large choice of modern finishes
- Supply already cut and ready for use
- Shaped endings add strength and safety
- Packaging on demand

DIMENSIONS

The two available sections for Oval wardrobe tubes are 22x15mm and 29x15mm. The range can be supplied as standard from a minimum length of 230mm to a maximum length of 1400mm. Holes can be stamped on the bottom side towards tube endings to allow the use of supports with pins, ensuring so further cabinet stability.

Oval wardrobe tubes are supplied in bundles of 20 and can be packed according to agreed customer specifications for transport and ease of packing with flat-pack furniture.

FINISHES

Oval wardrobe tubes are realised from high quality pre-coated steel coils, which ensure constant quality and stability of colour and a finish over time.

The different standard finishes available for Oval wardrobe tubes are: **zinc plated, nickel plated mat, titan grey, white and black.**

To protect the finish during transport and furniture assembly the wardrobe tubes can be upgraded with a protective peel-off foil in paper or plastic material.

TECHNICAL PERFORMANCE

Oval wardrobe tubes are quality products and meet or exceed the requirements made by international standards.

In particular, the load ability of the product range is 400 kg for a length of 1000mm.

The products are optimised for furniture use and pass salt spray tests with YY hours.

VARIANTS

End holes

On each end, a hole of 6mm can be punched to be used with wardrobe tube supports with pins and allowing so a further stiffening of the carcass, especially on flat-pack furniture.

Protective film

Upon request the wardrobe tube can be upgraded with a protective film for transport and assembly.

Packaging

According to the specifications agreed with the customer, different packaging variants to optimise logistics and furniture packaging can be developed.

VISION & MISSION

Well-equipped and well-functioning furniture in all price categories should contribute to wellbeing all over the world in the 21st century. Rennerich are contributing with smart sustainable solutions at the right price to achieve customer expectations in that field.

PRODUCTION

With over 70 employees in two plants with a total surface of 8.800 m², Rennerich are producing every year several millions of linear meters of roll formed furniture accessories like wardrobe tubes, sliding door profiles, sliding door handles and other furniture construction profiles. State-of-the-art equipment for stamping, roll forming and packaging ensure best-in-class performance.

QUALITY MANAGEMENT

The quality management applied by the company corresponds to the high expectations of the industry; quality is lived by the whole team. A tight and efficient organisation, performant equipment to the latest quality standards and clearly defined processes throughout the company ensure a constant quality level of all products and the respect of agreed lead times.

PORTFOLIO

Wardrobe tubes

Oval wardrobe tubes ensure orderly and safe storage of clothing in free-standing or walk-in wardrobes at leading manufacturers in Germany and worldwide.

Oval EN - 05/2017

Sliding door mechanisms

Overslide sliding door mechanisms allow quick and practical access to wardrobe content with price conscious and quality leading manufacturers worldwide.

Handle profiles

The Grip sliding door handle portfolio convinces through large choice of shapes and finishes and constant quality, with standard designs or models made to customer requirement.

Connection bars

Quickbar is the innovative solution for the top connection of bottom cabinets in kitchen and bathroom applications. Compact, strong and available as tool less version for flat-pack furniture or for factory assembled furniture as well.

Rollforming

More than a decade of experience in roll forming components for the furniture industry and other applications have turned Rennerich into a leading company in that field.

Stamping

Stamped components in steel, from a simple bracket to complex components are part of the competency of Rennerich since the beginning of the activity in furniture applications and other industries as well.
